Sashas[™]
BLEND
COMPLETE JOINT HEALTH

FREQUENTLY ASKED QUESTIONS:

Is Sashas Blend expensive?

Sashas Blend is very cost effective - its doesnt cost the world!

For a 20kg dog on Sashas Blend it costs approximately \$0.38 per day. The powder is easily mixed with food once a day. When comparing products don't look at unit cost, look at cost per dose because some products require high dose rates to be effective and therefore the cost per dose becomes more expensive. Sashas Blend is formulated on Science, so dose rates are determined based on weight and what we know the body is able to absorb.

Can Sashas Blend be used in conjunction with other nutritional supplements or specialist diet pet foods?

YES, Sashas Blend is a veterinary medicine that treats arthritic symptoms. Arthritis is a medical ailment that requires a veterinary medicine specifically for treatment of the disease, not a petfood or treat. The ability to increase/decrease dose rates without impacting on the calorific intake is integral as obesity is one of the largest causes of joint disease. Many specialist diet foods contain only low levels of chondroprotective agents, omega based ingredients, or only one or two GAGs such as glucosamine and/or chondroitin. Quite simply Interpath formulations are not based just on level of GAG and /or Omega – the constituents have been scientifically formulated to maximise effectiveness.

Can Sashas Blend be used with other pharmaceuticals (in particular NSAIDs)?

Sashas Blend can be used very effectively in conjunction with other medications including non-steroidal anti-inflammatory drugs (NSAIDs) and cartrophen (pentosan polysulphate). Sashas Blend, because of its potent anti-inflammatory properties, can be used to decrease the dosage of NSAIDs and help reduce the risk of possible side effects with this group of pharmaceuticals. It is possible to wean patients off NSAIDs with the use of Sashas Blend. Sashas Blend is a safe long-term treatment option. NSAIDs are still highly effective in dealing with acute pain and inflammation

Why should I use Sashas Blend?

Because it is scientifically formulated with full safety and peer reviewed and published efficacy studies undertaken. It is a natural blend of marine concentrates that have been scientifically formulated and proven to treat joint pain, inflammation as well as providing necessary chondroprotective properties. You can be CONFIDENT because it works, it's safe, it's cost effective and it is registered as Veterinarian Only.

Why is Sashas Blend more effective than Glucosamine or Chondroitin extract products?

Glucosamine and chondroitin sulphate are only two of the Glycosaminoglycans (GAGs) which are essential building blocks for joints and cartilage. Sashas Blend contains the full range of bioactive GAGs essential for joint health. These include – keratin (essential binding agent), dermatan, glucosamine and chondroitin. Sashas Blend also has proven anti-inflammatory, chondroprotective and pain relieving properties. Sashas Blend is the only natural product with a proven ability to suppress Nitric Oxide (this is vital in pain suppression, antiinflammation and viability of chondrocytes (cartilage) and synoviocytes (synovial membrane)).
